

Konnect Marketing — Full Service Page Copy (01-06)

Companion to the master blueprint · production-ready copy for all 6 service pillar pages, built on the Section 3.2 template. Bracketed figures ([xx%]) are placeholders — replace with verified numbers before publishing.

01 — Digital Marketing & Demand Generation

SEO Title: Digital Marketing & Demand Generation Services | Konnect Marketing **Meta**

Description: B2B digital marketing that runs in lockstep with your physical campaigns — paid search, paid social, SEO, and performance reporting mapped to every OOH and signage flight date. Nationwide, based in New Jersey.

Hero

H1: Digital Marketing & Demand Generation **Subhead:** The digital engine that fills the funnel your physical campaigns build. **CTA:** [Button: Get a Digital Marketing Quote]

Intro

A billboard or a branch display earns attention — but attention only becomes pipeline when someone can find you the moment they act on it. Konnect's digital marketing and demand generation team builds that bridge: paid search and paid social synced to your physical flight dates, SEO built around the same regions your signage and transit media are running in, and reporting that shows exactly how physical exposure turns into digital conversions.

What's Included

- Paid search management (Google Ads, Microsoft Ads), scheduled to overlap physical flight windows
- Paid social and programmatic display, targeted to the same geo-fenced radius as your outdoor and transit placements
- SEO and content strategy built around service and regional landing pages
- Conversion tracking and performance reporting mapped directly to OOH/signage flight dates

Who This Is For

- Multi-location businesses (banks, healthcare systems, retail chains) launching a physical campaign that needs a digital on-ramp
- B2B companies running trade show or event campaigns that need pre- and post-event demand capture
- Marketing teams whose current paid-media vendor can't speak to what's happening outside the browser

How It Fits the Modular Model

Start with digital support for a single regional campaign — paid search tied to one billboard flight, or paid social layered under one transit run. As attribution data proves the digital-

physical combination works, scope expands to more regions and more channels, without bringing on a second agency to do it.

Visual Gallery Direction

- Analytics dashboard mockup, clean UI, brand accent color
- Split composition: billboard on one side, phone showing a geo-targeted ad on the other
- Simple funnel graphic: Impression → Click → Conversion

Case Study / Stat Callout

█ [xx%] lift in branch-locator page visits during weeks a paired billboard flight was live.

Often Paired With

Outdoor & Transit Advertising · Video Display & Digital Signage

FAQ

Q: Do you run digital campaigns independently of physical media, or only alongside it?

A: Both — many clients start with digital alone, then add physical channels as budget and results justify it. The modular model works in either direction.

Q: Which platforms do you manage? A: Google Ads, Microsoft Ads, Meta, LinkedIn, and programmatic display, chosen based on where your specific audience actually is.

02 — Outdoor & Transit Advertising

SEO Title: Outdoor & Transit Advertising | Billboards, Bus & Transit Media | Konnect Marketing **Meta Description:** Static and digital billboards, transit shelters, bus and station media — placed near your branches and corridors, geo-fenced for attribution, and integrated with digital campaigns. Serving all 50 states.

Hero

H1: Outdoor & Transit Advertising **Subhead:** Physical placement, digitally attributed. **CTA:**

[Button: Get an Outdoor & Transit Quote]

Intro

Outdoor and transit media does something no digital channel can replicate — it puts your brand physically in front of your customer's daily route. Konnect places static and digital billboards, bus wraps, shelter panels, and station media strategically near your branches and highest-traffic corridors, then closes the loop with geo-fencing so you can see exactly how that physical exposure moves people toward a conversion.

What's Included

- Static and digital billboard placement and creative production

- Transit advertising: buses, shelters, and station media
- Strategic placement planning around branch locations and high-traffic corridors
- Full integration with digital campaigns already running in the same market
- Geo-fencing and analytics attribution tied to every placement

Who This Is For

- Regional and national banks or credit unions promoting branch locations
- Retail chains driving foot traffic to specific store corridors
- Any brand that needs physical presence in a market before or alongside a digital push

How It Fits the Modular Model

Start with a single billboard or transit run in one metro. Once geo-fenced attribution shows it's driving real foot traffic and conversions, expand into additional corridors, additional transit formats, or additional states — under the same team and the same reporting dashboard.

Visual Gallery Direction

- Digital billboard on a highway corridor at dusk
- Bus-side wrap in an urban setting
- Transit shelter panel positioned near a bank branch
- Map graphic showing a geo-fence radius around a placement pin

Case Study / Stat Callout

| [XX%] increase in geo-fenced foot traffic during a [X]-week transit shelter campaign near [X] branch locations.

Often Paired With

Digital Marketing & Demand Generation · Creative, Video & Motion Content

FAQ

Q: Can you place media near our specific branch locations? A: Yes — corridor and placement selection is built around your actual branch or store footprint, not generic high-traffic zones.

Q: How is attribution measured? A: Every placement is geo-fenced, so we can report foot traffic lift and downstream conversions tied to that specific location and flight window.

[Button: Get an Outdoor & Transit Quote]

03 — Video Display & Digital Signage

SEO Title: Video Display & Digital Signage Solutions | Konnect Marketing **Meta**

Description: Video walls, projection systems, and branch or corporate digital signage —

managed from one dashboard across every location, with real-time content updates. Nationwide deployment and support.

Hero

H1: Video Display & Digital Signage **Subhead:** One dashboard, every screen, every branch.

CTA: [\[Button: Get a Signage Quote\]](#)

Intro

A single impressive video wall in a flagship lobby is easy. Keeping consistent, on-brand content running across dozens of branches or locations — updated in real time, without a site visit for every change — is the hard part. Konnect designs, installs, and manages video walls, projection systems, and digital signage networks from one centralized platform, so your team controls every screen without needing a technician on-site.

What's Included

- Video wall and projection system design and installation
- Branch and corporate digital signage, indoor and outdoor rated
- Centralized content management platform — one login, every screen
- Multi-location scalability, from a single lobby to a nationwide branch network
- Real-time content updates and scheduling, pushed remotely

Who This Is For

- Multi-branch financial institutions standardizing lobby and drive-thru signage
- Corporate HQs and lobbies wanting a video wall as a brand statement
- Retail chains needing synchronized promotional content across locations

How It Fits the Modular Model

Start with signage in your flagship branches or a single headquarters lobby. Once the centralized platform proves it can manage content reliably and the visual impact is confirmed, expand chain-wide — new locations join the same dashboard, with no new vendor or re-onboarding required.

Visual Gallery Direction

- Video wall installed in a modern bank lobby
- Corporate lobby projection display at dusk/evening lighting
- Content-management dashboard mockup showing multiple connected screens
- Outdoor-rated signage mounted on a building facade

Case Study / Stat Callout

[XX] branch locations moved onto a single content dashboard, cutting signage update turnaround from **[X days]** to same-day.

Often Paired With

Interactive Environments & Motion · Creative, Video & Motion Content

FAQ

Q: Can we manage content ourselves after installation? A: Yes — the centralized dashboard is built for your team to push updates directly. We're also available for managed content service if you'd rather hand that off.

Q: Does this scale if we add new branches later? A: Yes — new locations connect to the same platform and account, which is the core of the modular model: no re-onboarding a new vendor as you grow.

Closing CTA

[Button: Get a Signage Quote]

04 — Interactive Environments & Motion

SEO Title: Interactive Environments & Touchscreen Experiences | Konnect Marketing

Meta Description: Custom interactive screen applications, touch and motion-based engagement, and location-aware content that turns passive signage into an active brand experience.

Hero

H1: Interactive Environments & Motion **Subhead:** Screens people stop for, not walk past.

CTA: [Button: Get an Interactive Environments Quote]

Intro

Static signage informs. Interactive environments engage. Konnect builds custom touch and motion-based applications that turn a lobby, branch, or trade show booth screen into something people actually stop and use — whether that's a product explorer, a wayfinding tool, or an educational experience tied to where the visitor is physically standing.

What's Included

- Custom interactive screen applications, built for your specific use case
- Touch-based and motion-based engagement design
- Location-aware content that changes based on where the screen is deployed
- Educational and informational use cases: wayfinding, product explorers, self-service kiosks

Who This Is For

- Corporate lobbies and branches wanting to move beyond static displays
- Trade show exhibitors wanting a booth that draws people in rather than just looping a video
- Educational institutions and healthcare systems with wayfinding or informational needs

How It Fits the Modular Model

Pilot one interactive application in a single high-traffic location — a lobby kiosk or a trade show booth. Once engagement data shows people are actually using it, the same application framework deploys across additional branches, locations, or future events.

Visual Gallery Direction

- Person interacting with a touchscreen kiosk in a corporate lobby
- Motion-triggered display at a trade show booth
- Wayfinding touchscreen in a corporate building
- Close-up of a location-aware content interface on-screen

Case Study / Stat Callout

[xx] average daily interactions on a lobby touchscreen kiosk within the first **[x]** weeks of launch.

Often Paired With

Video Display & Digital Signage · Lighting, Audio & Events

FAQ

Q: What kind of interactive applications can you build? A: Product explorers, wayfinding tools, self-service kiosks, and motion-triggered brand experiences — scoped to your specific space and audience.

Q: Does this require special hardware? A: It depends on the use case — we specify touchscreen or motion-sensor hardware as part of the initial scope, and it integrates with the same signage network if you're already running Konnect displays.

Closing CTA

[Button: Get an Interactive Environments Quote]

05 — Creative, Video & Motion Content

SEO Title: Brand Films, Explainer Videos & Motion Graphics | Konnect Marketing **Meta**

Description: Brand and corporate films, explainer videos, and motion graphics built for large-format displays — including compliance-aligned storytelling for regulated industries.

Hero

H1: Creative, Video & Motion Content **Subhead:** The content that fills every screen you deploy. **CTA:** **[Button: Get a Creative & Video Quote]**

Intro

A video wall or a digital billboard is only as strong as what's playing on it. Konnect's creative team produces brand films, explainer videos, and motion graphics purpose-built for large-format display — including content for regulated industries that needs to be accurate and compliant without losing its impact.

What's Included

- Brand and corporate film production
- Explainer and educational video content
- Motion graphics designed specifically for large-format displays and video walls
- Compliance-aligned storytelling for regulated industries (financial services, healthcare)

Who This Is For

- Companies with (or getting) Konnect-managed screens that need content to fill them
- Financial services and healthcare organizations needing marketing content reviewed against compliance requirements
- Brands preparing for a trade show or executive presentation that needs a polished film or motion piece

How It Fits the Modular Model

Content is often the first thing clients add once a signage or trade show engagement is already live — the same creative team then produces content for every new screen or channel added in later phases, so visual brand consistency never resets.

Visual Gallery Direction

- Behind-the-scenes video production shoot
- Motion graphics template mockup displayed on a large video wall
- Storyboard or pre-production sketch
- Finished branded video still frame, high production value

Case Study / Stat Callout

[X] compliance-reviewed video assets produced and deployed across [XX] branch signage screens in [X] weeks.

Often Paired With

Video Display & Digital Signage · Interactive Environments & Motion

FAQ

Q: Can you handle compliance review for regulated industries? A: Yes — our process for financial services and healthcare clients includes a compliance-aligned review step before any content goes live.

Q: Do you produce content for screens you didn't install? A: Yes, though content performs best when built for the specific display specs — we'll ask for those details up front.

Closing CTA

[Button: Get a Creative & Video Quote]

06 — Lighting, Audio & Events

SEO Title: Architectural Lighting, Event Production & Trade Show Support | Konnect Marketing
Meta Description: Architectural and event lighting, distributed audio systems, executive presentation support, and trade show and exhibition production — nationwide.

Hero

H1: Lighting, Audio & Events **Subhead:** Where the brand becomes a physical experience.

CTA: [\[Button: Get a Lighting & Events Quote\]](#)

Intro

Some brand moments need more than a screen — they need a room that feels different the second someone walks in. Konnect designs architectural and event lighting, builds distributed audio systems, and produces trade show and executive presentation environments that turn a space into a brand experience.

What's Included

- Architectural and event lighting design and installation
- Distributed audio systems for branches, corporate spaces, and events
- Executive presentation support: staging, AV, and lighting for leadership events
- Trade show and exhibition build-out and on-site production

Who This Is For

- Companies exhibiting at trade shows who need a full booth build, not just a banner
- Corporate offices hosting executive events, town halls, or investor presentations
- Brands wanting architectural lighting as a permanent part of a branch or HQ space

How It Fits the Modular Model

Start with a single trade show activation or one executive event. Once the production quality and on-site execution are proven, the same team can be brought in for recurring events, additional trade shows, or permanent architectural lighting installs across new locations.

Visual Gallery Direction

- Architectural lighting installation in a corporate lobby
- Trade show booth build with branded lighting elements
- Executive presentation stage setup, AV and lighting rig visible
- Distributed audio system speakers in a branch environment

Case Study / Stat Callout

[X]-city trade show circuit produced with a single consistent booth build and on-site crew in **[X]** months.

Often Paired With

Creative, Video & Motion Content · Interactive Environments & Motion

FAQ

Q: Do you handle on-site production, or just design? A: Both — we design the lighting, audio, or booth build, and we're on-site for installation, event-day production, and teardown.

Q: Can you support a multi-city trade show circuit? A: Yes — this is a common Phase 2 expansion under the modular model, using the same booth build and creative standards across every city.
